

NOBODY HAS TO TELL YOU THAT CONDENSER UNITS ARE HEAVY AND DIFFICULT TO MOVE!

If you have a heavy lifter, though, you'll only need one person to swap out units. That means reduced costs on the job, plus a second man is now available to go out on a separate call. Add in the extra safety that comes from using a machine that spares a tech's back and muscles and you have a win-win situation.

The cost of Comp-Lift units can be recouped with just a few install jobs.

COMPLIFT lifts and lowers residential compressors that are too heavy to lift by hand and/or units too tall to reach. This will save you time, save you money, and save your back!
